

1 Wooden frame
Struttura in legno

DNA - Inspired by the dynamic forms of biogenetics, the modular bench DNA consists in a unique construction assembly which is created by a single section of curved multilayered beachwood that is mirrored in design to create multiple seating configurations. The result of this system, is a captivating piece of furniture, shaped after the helix form, in which each completed section creates an individual seat for the user creating comfort in a public space.

DNA - Ispirata dalle forme dinamiche della biogenetica, la panca modulare DNA consiste in un singolo elemento in multistrato di legno curvato, assemblato specularmente. Il risultato é un avvolgente elemento d'arredo dalla particolare forma ad elica, ad ogni passo della quale corrisponde una seduta opportunamente separata dalle altre.

true

DNA - Multilayer beechwood structure, 18 mm thick, finished with oak wood or wengè. Connection system of each element by lasercut steel link.
DNA - Scocca in multistrato di faggio spessore mm 18, con finitura in legno rovere o wengè. Sistema di unione di ciascun elemento con piastra sagomata in acciaio.
