| mars
designed by Paul Brooks

|

Mars is a light and versatile family of meeting, visitor and conference seating whose slim and refined appearance belies a strong and exceptionally comfortable chair. The seat, back and arms combine to offer a unique aesthetic which is modern yet reassuringly practical and generously proportioned.

|

The Mars range consists of a four-legged and cantilever chair which can be specified with or without arms and with or without an upholstered back. The steel frames can be supplied either polished or painted to black or silver RAL 9006. The seat, back and arms can be supplied in black, grey or white. Upholstered versions are available in any fabric or leather.

|

Mars chair with a fully upholstered back.

| Mars chair with a semi upholstered back.

|

The seat, back and arms can be supplied in white, grey or black plastics.

Mars is an ideal product for conference facilities. It will stack confidently up to four chairs high, or the four leg version will stack ten chairs high with a trolley. The cantilever chairs will also stack onto the four leg frame.

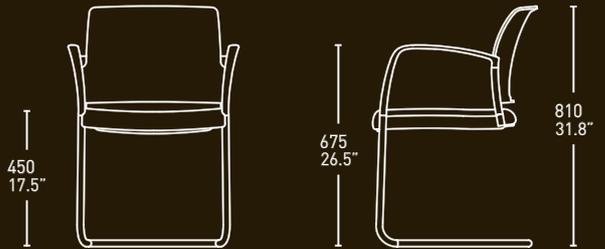

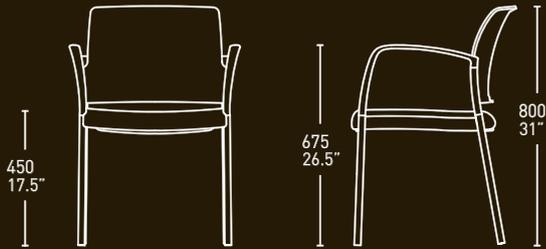

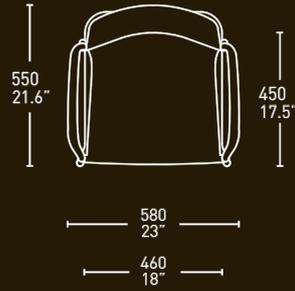

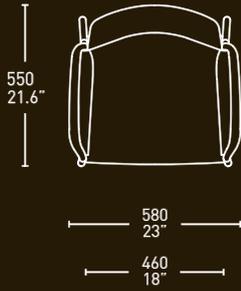

|

Mars is available with optional castors on the four legged version. Mars may also be specified with a four star base.

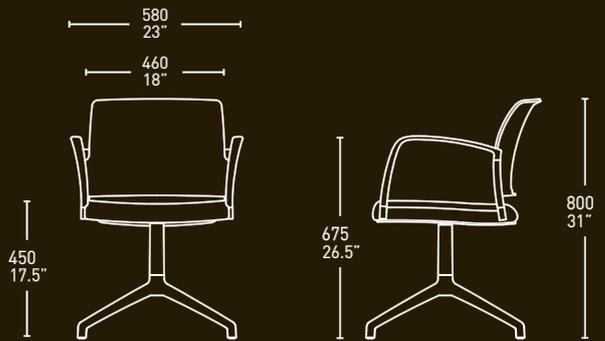

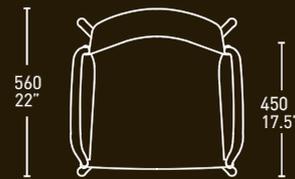

Mars has an optional linking device which slides discreetly underneath the seat when not in use. The linking clips are supplied in a chromed finish for maximum durability and can be configured to any one of three positions, allowing for the economical linking of armchairs, non-arm chairs or a combination of both.

Mars can be used in meeting, breakout, conference and third-space areas.

The Mars range consists of a four-legged and cantilever chair which can be specified with or without arms and with or without an upholstered back. The steel frames can be supplied either polished or painted to black or silver RAL 9006. The seat, back and arms can be supplied in black, grey or white.
