

# Cleaning guide

## METAL SURFACES

---

Wipe external walls and other metal elements with a dampened cloth and all-purpose detergent. Once you have cleaned the surfaces, please remember to wipe them dry.

## INTERIOR WALLS

---

Wipe external walls and other metal elements with a dampened cloth and all-purpose detergent. Once you have cleaned the surfaces, please remember to wipe them dry.

## FLOORING

---

Vacuum the carpet floor at least once a week.

## VENTILATION

---

Vacuum the ventilation / air vents located at the top of the cabin every quarter of the year. Before you start, please make sure to disconnect the pod from the power supply.

## GLASS SURFACES

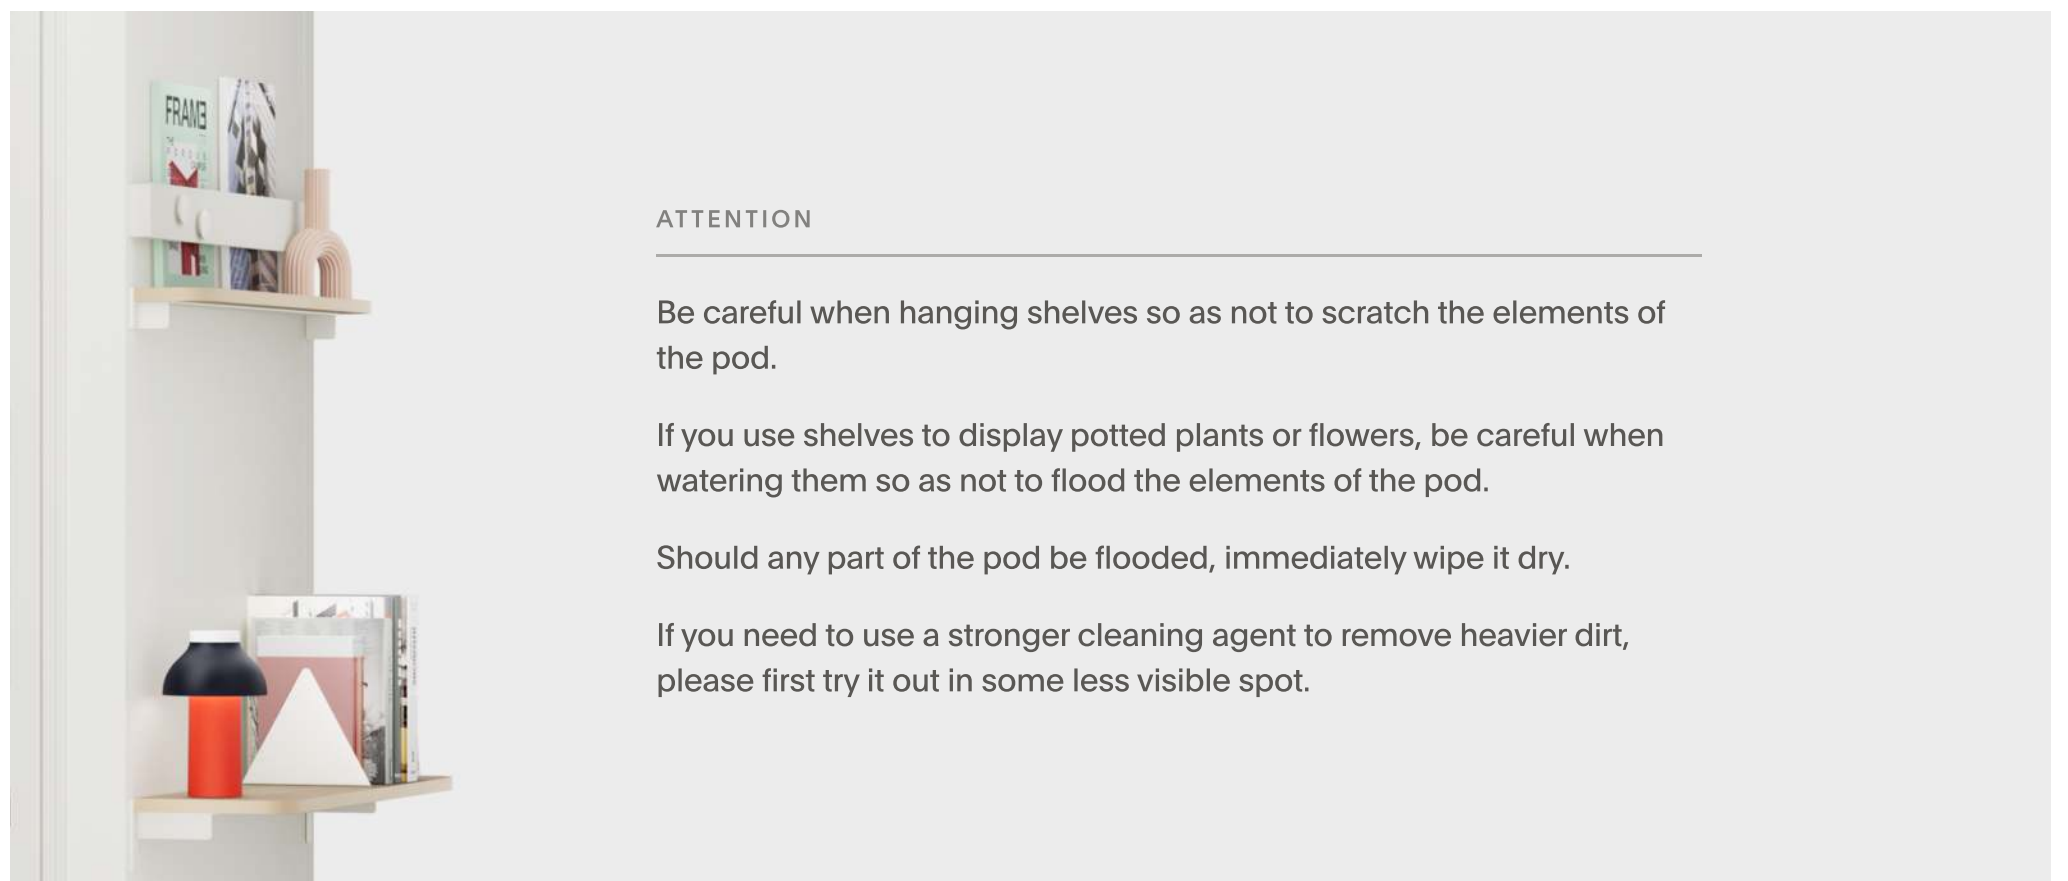

---

Use a soft, damp cloth to clean the glass. If heavier dirt appears you can optionally use liquid without ammonia.

## SEATING

---

When you want to clean a stool or a sofa, please use a soft moistened cloth. Do not use agents containing alcohol, acetone or other solvents. If the dirt is heavy, soak the cloth with liquid soap or furniture cleaner.

## ATTENTION

---

Be careful when hanging shelves so as not to scratch the elements of the pod.

If you use shelves to display potted plants or flowers, be careful when watering them so as not to flood the elements of the pod.

Should any part of the pod be flooded, immediately wipe it dry.

If you need to use a stronger cleaning agent to remove heavier dirt, please first try it out in some less visible spot.
