ABLE TABLE

ABLE TABLE

A straight forward table with strong character

The ABLE family continues to expand without losing its purpose or sustainability focus. Introducing a table that doesn't overpower a room yet still carries a strong presence. It allows you to either soften or emphasize its expression through your choice of colours and size. A die-cast zinc knot that is shared with the other members of the ABLE family, along with steel tubing creates clear intersections between materials and construction.

A sleek and refined table with a confident, distinctive approach that fits just as well in an office, a dining room, or a boardroom as it does at home. The original form of the table was somewhat more complex, but we refined and simplified it until the solution became self-evident. ABLE Table, at a height of 72 cm, comes with frames in four standard lengths, and each frame length is available with two standard tabletop lengths - with or without overhang on the short sides. ABLE Table is also available as a compact single-person workstation, perfect for placing it in the spotlight by a window or in a quiet corner that offers exactly the calm you need.

ABLE TABLE

ABLE Table first appeared in 2025 as a coffee table, with the same flexibility as the rest of the ABLE family: the option to choose between two heights, with or without castors, with one or two tabletops, and in three sizes. You can also choose from different tabletop materials and apply the same frame finishes available for ABLE. If needed, Able Table can be offered with castors.

ABLE TABLE

Inspire. Create. Deliver.
